

Public Report: Nickel Resource Estimate - Oconnor-Wilkins (New Amanda Mine)

Prepared for: Oconnor-Wilkins
Project: New Amanda Mine
Date: 03 March 2026
Classification: INTERNAL

Document Type	JORC
Commodity	Nickel
Organisation	Oconnor-Wilkins
Project / Operation	New Amanda Mine
Prepared By	James Taylor
Reviewed By	Jacqueline Vaughn

1. Executive Summary

This report outlines the mineral resource estimate for the New Amanda Mine project.

The estimation was conducted in accordance with the JORC Code (2012 Edition) regarding Nickel.

2. Geology and Mineralisation

The deposit is characterized by plan-hosted mineralisation within a travel sequence.

Structural controls include stratigraphic pinch-outs.

3. Sampling and Sub-sampling Techniques

Sampling was primarily achieved via Reverse Circulation drilling.

Samples were split using a riffle splitter to ensure representative sub-sampling for assaying.

4. Estimation and Reporting of Mineral Resources

Ordinary Kriging was utilized for the Nickel grade interpolation.

Cut-off grades were determined based on current economic assumptions and metallurgical recovery rates.
