

Technical Feasibility Study: South Robert Mine Operations

Prepared for: Wyatt-Huynh
Project: South Robert Mine
Date: 04 February 2026
Classification: RESTRICTED

Document Type	TECHNICAL
Commodity	Iron Ore
Organisation	Wyatt-Huynh
Project / Operation	South Robert Mine
Prepared By	Dylan Brown
Reviewed By	Joseph Haynes

1. Project Infrastructure

Current site infrastructure at Wyatt-Huynh supports a processing capacity of 8 Mtpa.
Power requirements are met through a combination of grid and onsite LNG generation.

2. Metallurgical Testwork

Recoveries for Iron Ore are modeled at 97.7%.
Testwork was performed at Alexander-Stewart laboratories using representative composite samples.

3. Mine Design and Scheduling

The mine plan utilizes a top-down sequence.

Waste rock characterization indicates low potential for acid mine drainage.
